Inside the Mind of a Young Professional: A Conversation with Sreeka Bandla

By Vida Berns | January 13, 2020

When did you first realize that you had a passion for the stars?

I think it started when I was very young. My parents had a very busy schedule, so they were not home much. So I used to go outside and watch the stars with my aunt. I think that was the moment I first became aware of the universe and that there were things out there that were bigger than me. That was the beginning of my journey into understanding the universe.

What are the biggest challenges you've faced in your career so far?

The biggest challenge is deciding what I want to pursue in my career. I have always been interested in science and technology, but I wasn't sure which field I wanted to go into. I went to college for physics, but I didn't enjoy it. Then I went to graduate school for engineering, but I still wasn't sure if I wanted to pursue science. It was a difficult decision, but I'm glad I made the choice I did.

What are your future goals and what do you plan to do after you graduate?

I want to pursue a career in space exploration. I want to work on missions to Mars or even beyond. I also want to help develop new technologies that will allow us to explore the universe further. I plan to continue my education and pursue a doctorate in space science. I also want to work at NASA and help advance the field of space exploration.

What advice do you have for young people who are interested in pursuing a career in space?

I would advise young people to follow their passions and not be afraid to explore different fields. It's important to try different things and see what you enjoy. It's also important to stay curious and keep learning. Space is a vast and fascinating field, and there are so many opportunities for young people to get involved. I encourage young people to pursue their dreams and make a difference in the world.

What do you enjoy doing when you're not working on a science project?

When I'm not working on a science project, I enjoy spending time with my family and friends. I also enjoy reading and watching movies. I'm a big fan of science fiction, and I love to learn about new technologies and advancements in the field.

What do you think is the most exciting thing about working on a science project?

I think the most exciting thing about working on a science project is the potential for discovery. Every project has the potential to discover something new about the universe, and that's incredibly exciting. It's also exciting to see how new technologies can be used to advance scientific research.

What do you think is the most important thing that young people can do to make a difference in the world?

I think the most important thing that young people can do to make a difference in the world is to follow their passions and pursue their dreams. It's important to stay curious and keep learning, and to be open to new ideas and possibilities. Young people are the future of the world, and they have the power to make a difference. I encourage young people to be大胆和创新，因为他们的想法可能改变世界。
